ONE HOUR FIRE RESISTANT FILING CABINETS

Protect your important files, documents and film negatives from fire while keeping them organised in our fire resistant filing cabinets.

All of these units are tested to UL Standards which gives the filing cabinet/safe a One (1) hour fire rating at 1100°C. With individually locking drawers and each drawer designated an individual key number, these filing cabinets/safes are brilliant value as they can act as 4 safes in one.

Holding up to 80kg per drawer and featuring 4 locking bolts, these filing cabinets/safes are strong and provide additional security for your documents. Our filing cabinet range features either an electronic keypad or a 3-wheel changeable combination lock to top drawer only with key locks for the remaining drawers, and can be supplied with or without wheels.

There is also a drawer lock controller fitted to the top draw, meaning that if the combination/electronic lock is open but the top drawer is not unlocked, the rest of the drawers cannot be opened. The drawers are able to accommodate a standard suspension file, and each drawer has 2 dividers as standard. Each drawer is fitted with load bearing-runners and tracks, for long life and ease of use.

K.S. FIRE-PROOF TEST RESULT

① Temperature in the Furnace.

② Safe interior temperature.

KOREA INDUSTRIAL ADVANCEMENT ADMINISTRATION

Please note: Fire resisting filing cabinets are not designed to be burglar proof, but do offer a higher degree of protection against attack over standard filing cabinets.
